

Song written to araise awareness of the affects of Global warming on our Planet Earth and in conjunction with the COP21 talks in Paris .

You must have heard of " Laudato Si "  
implementing it's contents must begin with me  
for the birds and bees and our many trees  
are our friends on the street where we live

2

Are there lilack trees in the heart of town  
should we look up instead of down  
doe's awareness pour out of every door  
Let's begin on the street where we live

3

And oh the comforting feeling  
that the C.O.P. talks will bring us some cheer  
and oh the less powerful feeling  
that our government will say it is too dear

3

Well if our emissions continue to rise  
you and I know we will pay the price  
so let's get out ,we have to shout  
for our planet on the street where we live

4

For 30 years is a very short time  
to undo the damage we've done along the line  
from 1degree to 2 we will surely rue  
for to save our earth there will be no crew.

5

While the C.O.P.are in talks in Paris

may we cop on and get into harness

to reduce our emissions ,beat our breasts with contritions

Renew the face of the earth

on the street where we live .
